Getting Started with LUNA

To begin using LUNA, you must be on campus. Simply go to http://umassamherst.lunaimaging.com/luna/servlet/.

If you are off campus, you must access the system through UMass' proxy server. To do this, you have to use the Library’s database locator: http://www.library.umass.edu/ndl/view.

On the bottom row is a link to “Images”. Click on it to go to a list of image databases.

On the next screen click on the LUNA link.

You then come to a page that will establish you as a UMass user. Fill in your UMass email ID and your password and click on “Login.”

You may want an individual username & password for LUNA. This will allow you to skip the proxy server step while off campus and build groups of images within the system. Please request one from bps@library.umass.edu. If you have a LUNA password, click on the Login link to enter your user information.

Once your user information has been entered, you will reach a screen that displays all collections available to UMass users. If you want to search all the collections at once, just enter your search terms in the box at the top right of the screen.

To get into any single collection, click on the name in the column on the left.

You may then enter search terms to search that collection only,
or choose to browse in that collection.
Open your image groups, search Flickr, browse the Who, What, Where, When categories

Search by different categories

Create a new group of images

Create a URL to use in a website

Change the number of thumbnails visible or the size of the thumbnails

Send an image into a group.

Send an image into a group.

View image data

Zoom in & out of image

Single click on an image to see it larger or to see its data
